

Advancements in Agricultural Development (ISSN 2690-5078)

Review Criteria

Manuscripts sent for review in Advancements for Agricultural Development will be assessed using the following criteria. For each section, reviewers will be asked to indicate if it is acceptable, needs improvement, or unacceptable. Reviewers are also encouraged to provide comments to help the authors improve the manuscript.

Introduction and Theoretical Framework

Introduction:

This section should be concise and broadly set the tone for the paper in the context of the problem being addressed. This section should conclude with a statement of the problem being studied.

Theoretical Framework:

This section should be succinct and state the major theoretical or conceptual underpinnings of the problem being studied. This section should include a declarative statement about the theory or concept in context, there is no need to spend an exhaustive amount of text to explain well-established theories.

Purpose and Methods

Purpose:

This section should include the overall purpose of the study and specific objectives or as appropriate, research questions.

Methods:

This section should provide a concise description of the methods and procedures used in the conduct of the study, unless more information is needed about a novel method or procedure. Well-known terms and procedures do not need excessively long descriptions. There is an expectation that the methods demonstrate sufficient rigor to support generalizability and/or transferability of the results. Exploratory studies are not suitable for publication in AAD.

Presentation of Findings

Findings: This section should be the major focus of the manuscript, present data being reported, and provide interpretations of such.

Contribution of Research

Contributions: This section must be based on the facts placed within the context of the theoretical or conceptual framework and problem statement. Conclusions should be drawn, either deductively or inductively, from the Findings section. Implications of the conclusions related to the problem being addressed should be discussed. Recommendations should be offered for practice and research, with an emphasis on recommendations to improve practice.

Writing

Writing: Please evaluate the clarity and conciseness of the writing. Note - there is no need to place an overemphasis on APA style issues. The editor team will ensure compliance with APA and style issues.
